PRINTING GUIDE

PRINTING BASICS

THANK YOU!

Thank you so much for choosing my printables - I hope you enjoy and love your planner pages!

GENERAL PRINTING

First, download and save your file somewhere safe on your computer (printing straight from the web can sometimes affect the design of the printable).

The quality of your planner pages will depend on your printer and paper quality, but they are designed to look great through both home and professional printers.

You can either print the Planner Pack as a whole, using the guidance below or print individual pages from the planner.

To print an individual page, open the Planner PDF and press print, then under the 'Pages to Print' section in the printing options select the page/pages you want to print. Select how many copies you want and make sure you have selected the correct paper size in 'Page Setup' before pressing print.

PRINTING TWO TO A PAGE

Once you have opened the planner PDF with Adobe Reader and pressed print, make sure you have the correct paper size chosen in the 'Page Setup' area and then choose the booklet option.

Print the odd pages first by clicking this option under the 'Pages to Print' section, then reinsert the pages and print the even pages on the back.

Note: Colors may print differently based on the quality of your printer

PRINTING GUIDE

PRINTING BASICS

PRINTING DOUBLE-SIDED

If your printer can auto-duplex the pages, sit back and relax while your printer does the work for you! If not, print the odd pages first by clicking this option under the 'Pages to Print' section, then re-insert the pages and print the even pages on the back.

CHECK! CHECK! AND CHECK AGAIN!

It's always a good idea to print a few test pages to make sure you're happy before printing the whole planner. Options for printing will depend on your printer + ink + paper so I can not offer much more specific advice, but hopefully the above is helpful to you :)

HAPPY PLANNING!

Kayla Amma Rose Warner
